

StorVault – Insights into the ultimate backup and recovery solution

Introduction

StorVault is a world-renowned brand that has been associated with data backup and recovery services for more than two decades.

StorVault specialises in Cloud Storage based on a world-class data centre located in South Africa to provide high performance, cost effective, secure and reliable offsite backup and recovery services. These services are delivered into the market through a nationwide network of fully-certified professional resellers. These suppliers are

managed by one of three industry-leading IT distributors appointed by StorVault to help guarantee the immediate availability of backup and recovery services throughout the country and beyond.

StorVault's portfolio of online backup and recovery services meet the data protection needs of all users – from a single home user to enterprises with many thousands of users; and from capacities that range from a few megabytes of personal information to thousands of terabytes of priceless corporate data.

- **StorVault Office 365® with eDiscovery powered by Metallic®** – StorVault Office 365® with eDiscovery powered by Metallic® provides a singular interface to drive organisational compliance with better speed and precision. Paired with Metallic® data protection, organisations get the best of industry-leading backup and recovery, combined with advanced tools to satisfy the highest possible standards of regulatory compliance.
- **StorVault Cloud Storage** – StorVault Cloud Storage addresses long-term data storage requirements based on ease-of-use with no additional hidden fees or API call charges making the solution extremely affordable based on extremely competitive and predictable pricing.
- **StorVault FileSpace powered by LucidLink** – StorVault FileSpace powered by LucidLink is a cloud-native file service connecting file systems to object-based cloud storage. It streams files from cloud object storage directly to clients, eliminating the hassle of copying or syncing, while providing highly secure end-to-end encryption. With FileSpace, clients can mount and use cloud object storage as distributed file systems. Designed specifically for extensive data access over distance, to improve workload efficiency and maximise productivity.

How it works

The StorVault online backup and recovery service is initiated by a StorVault software agent that is downloaded and registered on a target device via a web portal according to a user-selected subscription-based service plan. Once installed the selected service agent will provide a pre-configured, highly-automated backup routine designed to ensure that all data destined for backup is transferred over the internet to StorVault's purpose-built, highly-secure, Cloud storage facility in South Africa.

The service features an easy-to-use, highly configurable single web console with user access control that enables key functions such as routine monitoring and detailed reporting on all backup activities.

Access to and recovery of all backed up data is facilitated through the web console by simply navigating to the recovery point via the intuitive interface, selecting the files or folders to be restored and clicking restore.

All restore requests can be performed to either the original location or an alternate destination or device and can be performed from anywhere at any time. Backup data is encrypted during the backup, in transit and at rest in the StorVault Cloud.
